

Water Separators

Per shift, a bucket of water or more can be produced by condensation in the compressed airline system. This water sometimes makes pneumatic machines freeze up and can cause corrosion.

The CP Water Separators operate on the centrifugal principle, with automatic emptying

of the condensate. It is delivered without claw couplings. The thread size is 3/4" and has BSP standard for European markets and NPT standard for the US market.

CP Water Separators – for daily protection

Description	Hose connection		Air Flow		Weight	Suitable claw couplings		Part number
	mm	in	l	cfm		European type (BSP)	US Type (NPT)	
Water Separator, 3/4" BSP (EU Version)	20	3/4	61	130	0,8	9000 0302 00	-	8900 0050 00
Water Separator, 3/4" NPT (US version)	20	3/4	61	130	0,8	-	9001 0005 02	8900 0050 01
